

one parity at two values

thirteen ratios move all
four coordinates, one by -1 :
weight 256 (magenta) or 64;
a cut weighs ≥ 1024

within five values

(a) adjacent shifts,
(b) one parity at two,
(c) three apart, (d) a gap;
green: $\dim \text{Ext}^2 \geq$

the diagonal at $n = 4$

3668 diagonal classes

cup products: $\text{rank} \leq 3184$

kernel ≥ 484 , every convolution

104 allowed by the criterion

longer products must
remove at least 380;
exactly 484 for general
components
