

● reached with $\rho_1 = \rho_2$, as for a rational class

● $R_1 = R_2 = 8$

○ reached only with $\rho_1 \neq \rho_2$

● some $R_t = 7$: an exceptional coefficient

$r(\gamma) = 64 + 16\mu + 4\rho_1 + 4\rho_2 + R_1 + R_2$; $\mu = 1$ forces $\rho_1, \rho_2 \geq 1$, and $R_t = 7$ forces $\rho_t = 2$
